SUMMARY

Final year Software Engineering student at Universiti Malaya with internship experience in software testing and Odoo ERP development. Builds web and mobile applications using Python, React and React Native, translating user requirements into working features. Seeking a **six-month** full-stack development internship, available from 25 January 2027.

EDUCATION

Universiti Malaya 2023 - 2027 (Expected)
Bachelor of Computer Science (Software Engineering)
CGPA: 3.79/4.0

EXPERIENCE

Keyway Digital Labs Sdn. Bhd. July – September 2026
QA & ERP Developer Intern

- Authored 916 black-box test cases, executed test runs and reported 130+ bugs across KeywayEHS modules, including incidents, HIRARC, permit-to-work and safety inspections.
- Gathered HR requirements and customised Odoo features using Python and XML; consolidated training and attendance modules through shared code and permissions to reduce duplication.
- Implemented training reminders with contact-based fallback across work email, personal email and WhatsApp, plus escalation to managers when employee contact details were unavailable.
- Built employee badge printing with HR-uploaded templates, employee photos and identifiers, plus configurable fonts and wording.

PROJECTS

Wick — Stress & Workload Manager | CodeNection 2026 **-** Prototype & GitHub
React Native, Expo, TypeScript, Supabase, VisionCamera

- Developed front-camera rPPG and fingertip PPG processing for pulse estimation, signal-quality checks and personal baseline calibration, integrated with adaptive focus sessions and guided breathing.
- Implemented Circles features for invite-code connections, peer support and shared recovery challenges within a two-person team.

GeoQoE Pulse (Mobile QoE Intelligence System) | ASEAN GeoAI Fusion 2026 - Prototype & GitHub
Python, GeoPandas, GIS, H3, JavaScript, LLM APIs

- Built a 10-stage data and GIS pipeline integrating network and geospatial datasets; standardised coordinate systems and aggregated geospatial layers into H3 cells for network quality analysis.
- Integrated LLM APIs with web retrieval to surface source-linked events and holidays as possible context for network planning.

AegisAI (Enterprise AI Governance Gateway) | Hack Attack 2026 - GitHub
Python, FastAPI, React, TypeScript, Microsoft Presidio, spaCy

- Developed a FastAPI backend for sensitive-data detection and masking using regex and Presidio/spaCy, with LLM-provider routing and fallback handling.
- Implemented JWT authentication, backend role checks and persistent audit logging.

KeretaSewa AI (Decision Intelligence for SME Car Rentals) | UMHackathon 2026 - GitHub
React, Firebase Firestore, Firebase Authentication, Recharts, PapaParse, jsPDF

- Developed the React frontend and analytics dashboard to present monthly revenue, utilisation, idle-day summaries and booking patterns from rental records.
- Implemented CSV import with duplicate checks against stored bookings, Firestore data operations, Firebase Authentication and PDF report generation.

COMPETITIONS & AWARDS

- ASEAN GeoAI Fusion 2026 — Top 17 Finalist
- Programming League National (PLN) 2025 — Open Category National Finalist

SKILLS

Programming: Java, Python, JavaScript, TypeScript, SQL, HTML/CSS, XML
Frameworks & Tools: React, React Native, Node.js, FastAPI, Odoo, Git, Expo
Databases: Firebase, PostgreSQL (Supabase)
Testing: Manual testing, black-box testing, Selenium, Appium
